Building the Communicators Organisations Need

AI FOR COMMS

The Strategic Application of Artificial Intelligence in Communications

Think strategically. Work smarter.
Communicate better with AI.

Full-Day Programme

26 January 2027

9.00am – 5.00pm

Liberal Latte, Wisma E&C,
Jalan Dungun, Kuala Lumpur

RM 2,000
per participant

Limited to 30
participants only

HOW CAN AI HELP US MAKE BETTER COMMUNICATIONS DECISIONS?

DISCOVER → ANALYSE → ADVISE → ACT → EVALUATE

For Communications Executives, Managers and practitioners involved in Corporate Communications, Strategic Communications, Public Relations and Reputation Management.

An Intermediate Programme for Communications Professionals

AI offers communicators more than faster content production. It can generate insights, strengthen strategic planning and improve decisions about stakeholders and reputation.

AI FOR COMMS develops the knowledge and practical skills to apply AI to research, stakeholder analysis, communications planning, reputation management and organisational decision-making.

Exercises, case discussions and real-world scenarios explore responsible AI use while maintaining human judgement, creativity and professional accountability.

Programme approach

Facilitated discussions, practical AI demonstrations, case studies, scenario exercises and a capstone activity.

Recommended prerequisite

Communications fundamentals and basic familiarity with generative AI tools.

Learning Outcomes

By the end of the programme, participants will be able to:

01 Explain the strategic opportunities and limitations of AI in corporate and strategic communications.

02 Apply AI to support communications research, stakeholder analysis and intelligence gathering.

03 Use AI-assisted insights to develop communication strategies, messages and engagement approaches.

04 Evaluate how AI can support reputation management, issues monitoring and crisis preparedness.

05 Recognise ethical, reputational and governance risks associated with AI and apply appropriate safeguards.

06 Develop practical AI-enabled workflows and an implementation plan to improve communications effectiveness.

Your Speaker

Mohd Bazli

Mohd Bazli is a strategic communications and digital specialist with 15 years of experience spanning Fortune 500 corporations, consulting and entrepreneurship. With a background in software engineering, he brings a distinctive combination of technology, communications and data-driven thinking to complex business and reputational challenges.

His expertise spans strategic communications, digital and social media strategy, analytics, reputation management and stakeholder engagement. He has advised corporate leaders, business owners and strategists on strengthening reputation, shaping narratives and making better-informed decisions in complex information environments.

With a strong interest in data, emerging technologies and artificial intelligence, Bazli focuses on a question that is increasingly important for communicators:

How do we turn the enormous amount of information available to us into better communications decisions?

His work explores how data and technology help organisations understand audiences, identify emerging issues and reputational risks, measure communication effectiveness and respond to changing stakeholder expectations.

Across corporate and entrepreneurial environments, he brings a practical understanding of how strategy adapts to different organisations, resources and stages of growth.

At the intersection of strategy, communications, data and technology, his principle is:

Turn information into insight.
Insight into strategy.
And strategy into measurable impact.
